

Example = 6.2

The vertical bar AB = 150g

The bar is elevated from rest at $\theta = 0^\circ$
with a constant couple $M = 5 \text{ kN}\cdot\text{m}$ at C

Determine the angular acceleration α of the links as a function of θ

Find the force B in the link DB at the instant when $\theta = 30^\circ$.

Kinematics

$$\vec{r}_{A/C} = \vec{r}_{A/C} \alpha$$

$$M = 5 \text{ kN}\cdot\text{m} = (1.5 \text{ m}) \cdot A_t$$

$$\therefore A_t = \frac{5}{1.5} = 3.33 \text{ kN}$$

$$\sum F_t = m a_t$$

$$\sum F_t = A_t - mg \cos \theta = (3.33 \text{ kN}) - (0.15 \text{ kg})(9.81 \text{ m/s}^2) \cos \theta$$

$$m a_t = m r \alpha = (0.15 \text{ kg})(1.5 \text{ m}) \alpha$$

$$(3.33) - (0.15)(9.81 \cos \theta) = (0.15)(1.5) \alpha$$

$$\alpha = 14.81 - 6.54 \cos \theta \text{ Ans. (rad/s}^2\text{)}$$

$$\int \omega d\omega = \int \alpha d\theta$$

$$= \int_0^\theta (14.81 - 6.54 \cos \theta) d\theta$$

$$\frac{1}{2} \omega^2 = 14.81 \theta - 6.54 \sin \theta$$

$$\therefore \omega^2 = 29.6 \theta - 13.08 \sin \theta$$

$$\theta = 30^\circ \rightarrow \alpha = 9.15 \text{ rad/s}^2$$

$$\omega^2 = 29.6 \times (30^\circ) \cdot \frac{\pi \text{ rad}}{180^\circ} - 13.08 \sin 30^\circ$$

$$= 8.97 \text{ (rad/s}^2\text{)}$$

$d\vec{e}_t = d\theta \vec{e}_n$
 $\dot{\vec{e}}_t = \dot{\theta} \vec{e}_n$
 $\dot{\vec{e}}_n = -\dot{\theta} \vec{e}_t$

$d\vec{s} = r d\theta$
 $\frac{ds}{dt} = r \frac{d\theta}{dt}$
 $v = r \dot{\theta} = r \omega$

$\vec{v} = v \vec{e}_t = r \omega \vec{e}_t$

$\vec{a} = \dot{\vec{v}} = \dot{r} \omega \vec{e}_t + r \dot{\omega} \vec{e}_t + r \omega \dot{\vec{e}}_t$
 $= r \omega^2 \vec{e}_n + r \alpha \vec{e}_t$

$\therefore a_n = r \omega^2$
 $a_t = r \alpha$

$$\sum M_A = m \bar{a} \cdot d$$

$$= m r \alpha = (0.15)(1.5)(9.15) = 2.06 \text{ kN}$$

$$\sum M_A = (1.8 \text{ m}) \cdot (B \cos \theta) = (B \cos 30^\circ) \cdot (1.8)$$

$$m \bar{a} \cdot d = (m a_n \cos \theta)(1.2) + (m a_t \sin \theta)(1.2)$$

$$= (m r \omega^2 \cos \theta)(1.2) + (m r \alpha \sin \theta)(1.2)$$

$$= m r \omega^2 = (0.15)(1.5)(8.97) = 2.02 \text{ kN}$$

$$\therefore B = 2.14 \text{ kN Ans.}$$
